Presha Software Mega Menu Module

Mega Menu is useful for showing category in interactive manner with its level.

Features

- **Backend**
  - o Easy to set category level.
  - o Easy to set subcategory's width.
  - o Easy to remove category which doesn't have products
- **Frontend**
  - o Easily show filterable categories

STEP FOR INSTALLATION

1) **Installation**
   - o Magento **MegaMenu** Module installation is super easy you need to copy-paste **app** folder in Magento root directory.

2) **Configure MegaMenu Settings**
   - o Go to admin panel System -> Configuration -> Mega Menu(left menu)

- o **Enable:** Here you can Enable/Disable Module.
- o **Visible menu depth:** set level of category for display in frontend.

o **Display empty categories:** category will not display at front which doesn't have product

o **Number of columns:** set the number of columns.

o **Width:** set the subcategory's width to display at frontend.

Once all the steps are done, the above screen is how the setting changes will be reflected on the screen
